Roadmap for the G20 Resource Efficiency Dialogue

(2024-2028)

On the occasion of the G20 summit held in Hamburg, Germany, on 7-8 July 2017, the G20 Members decided to establish a G20 Resource Efficiency Dialogue. The key aim of this Dialogue is to make the efficient and sustainable use of natural resources, with a focus on material resources, a core element of the G20 talks.

The G20 Resource Efficiency Dialogue (hereinafter "the G20 RE Dialogue") developed an initial Roadmap in Tokyo, Japan, on 9-10 October 2019, to promote activities more effectively. This was carried out upon request of the G20 Environment Ministers, as described in the Communiqué of the Ministerial Meeting on Energy Transitions and Global Environment for Sustainable Growth adopted in June 2019.

In the G20 Environment Ministers Communiqué adopted in Naples, Italy, on 22 July 2021, the G20 Environment Ministers call for action on sustainable and circular resource use and entrust the G20 RE Dialogue to step up action to implement the G20 vision on resource efficiency and circular economy to achieve SDG 12 and other relevant SDGs: encourage innovation, design, and manufacture to ensure product longevity, enable repair, reuse, and recycling, and other value retention approaches, sustainable use of natural resources, minimize waste and emissions, regenerate ecosystems, sustainable supply chains, and create sustainable and socially inclusive business models.

G20 Members acknowledge that resource efficiency and circular economy are important tools available for the achievement of sustainable development and that they can contribute significantly to sustainable consumption and production as well as to addressing climate change, biodiversity loss, land degradation and pollution.

The G20 RE Dialogue will do so by sharing information on relevant national indicators, targets and best practices in all the areas referred to in Paragraphs 18 and 19 of the Environmental Ministers' Communiqué adopted in Naples, Italy, to strengthen policy development and by further developing its portal.

In 2023, G20 members under India's G20 presidency discussed important topics like circular economy in steel sector, extended producer responsibility for circular economy, circular and sustainable bioeconomy, and industry collaboration to promote resource efficiency and circular economy. The G20 members under India's G20 presidency further updated the roadmap for G20 RE Dialogue to guide the activities during the timeframe 2024-2028.

To promote resource efficiency and circular economy, the G20 RE Dialogue will:

1. Continue to share actions and good practices

- The G20 Presidency may host one or more G20 RE Dialogue meetings to share knowledge, actions and good practices related to resource efficiency and circular economy in light of progress made in each Member.
- During the G20 RE Dialogue, the G20 Presidency or any of the G20 Members in collaboration with the G20 Presidency, and with their agreement, can organise workshops or sessions by addressing specific themes.
- Topics and activities advanced by G20 Members, voluntarily under the Roadmap, are listed in the Annex.
- A website for the G20 RE Dialogue has been established^[1] to ensure timely and regular sharing of information and has for the time being been managed and updated with the support of the Ministry of the Environment, Japan. The G20 Presidency will facilitate the submission of voluntary contribution of contents for the website from G20 Members.
- Each of the G20 Members should appoint a focal point for the G20 RE Dialogue, and the G20 Presidency will update and share a mailing list of the focal points.
- The G20 Members are invited to identify key stakeholders that may contribute to the work of the G20 RE Dialogue and whose mailing list information can also be maintained as a resource for the G20 Members.
- 2. Strengthen and mainstream resource efficiency policies

- Taking into account the discussions on the above topics in future G20 RE Dialogues, the G20 Members will actively engage in policy development and take actions for pursuing sustainable consumption and production, and for improving resource efficiency through circular economy, sustainable materials management, the 3Rs (reduce, reuse, recycle) as well as redesign, refurbish, remanufacture and waste-tovalue approaches, including increasing the quality and availability of feedstock, addressing a wide range of environmental challenges, enhancing competitiveness and sustainable economic growth, creating and upgrading recycling infrastructure, managing resources sustainably, and creating jobs, in accordance with national circumstances, priorities, and needs.
- Noting co-benefits and trade-offs of resource efficiency improvement, the G20 Members will further facilitate inter-ministerial discussions and more effective policy alignment. In this regard, the G20 Presidency will consider extending invitations to various ministries to attend the G20 RE Dialogue when relevant topics are discussed.

3. Improve measurement of resource efficiency and circular economy

The G20 Members are encouraged to share national actions for development and monitoring of resource efficiency and circular economy indicators, especially indicators that demonstrate how resource efficiency and circular economy approaches are helping to meet environmental goals set in relevant multilateral environmental agreements, nationally determined contributions to address climate change, and/or the Sustainable Development Goals. The G20 members are also encouraged to endeavour to monitor the progress of policies based on statistical data, and develop capacity to have indicators at the national level, referring to work performed by international organisations such as the United Nations, OECD and IRP on waste statistics and material flow indicators, in particular. G20 Members are invited to increase cooperation, partnerships and joint studies to improve knowledge and alignment on measurement of resource efficiency and circular economy, including cooperation to improve information on transboundary resource flows, to inform national policies in a globalized world.

- Highlighting the role of sustainable consumption and production, including through resource efficiency and circular economy, for achieving the Sustainable Development Goals and relevant indicators, the G20 RE Dialogue will explore possibilities to improve sustainable consumption and production measurement and encourage the G20 Members to monitor relevant indicators.
- The G20 RED, in cooperation with relevant international organisations, such as UNEP, UNIDO, IRP and OECD, will promote sharing of information on relevant national targets on resource efficiency, circular economy and sustainable consumption and production, and will exchange information on indicators and measures implemented by G20 Members to meet such targets.

4. Encourage innovation and create opportunities

- The G20 Members also recognize that technological and non-technological innovation is necessary for resource efficiency improvement and that resource efficiency and circular economy have great potential for enhancing competitiveness and sustainable economic growth, managing resources sustainably, and creating jobs, while reducing all types of emissions. To create opportunities and stimulate innovation, the G20 RE Dialogue will promote communication with business representatives such as the B20, and encourage the participation of the research community through the IRP and other bodies.
- The G20 RE Dialogue will share insights and experiences around public policy instruments, which effectively incentivise industries to innovate.
- The G20 RE Dialogue will facilitate inter-sectoral actions and discussions for effective and innovative opportunities, with the understanding that resource efficiency improvement is a cross-cutting agenda.

5. Encourage multi-stakeholder engagement

 The G20 RE Dialogue will actively collaborate with various public and private stakeholders related to the topics of the G20 RE Dialogue meetings, as well as set opportunities for facilitating further collaboration.

- G20 RE Dialogue may also invite private sector organisations, for example, B20 and Resource Efficiency and Circular Economy Industry Coalition (RECEIC) to leverage synergies and to strengthen actions on resource efficiency and circular economy.
- G20 Members recognizes that youth are at the forefront of moving towards fairer and more sustainable purchasing models and that they are influencing how the world produces, distributes and consumes. G20 RE Dialogue will therefore increase the involvement of youth to enhance cooperation and foster sharing knowledge on innovative resource efficiency practices and approaches, mindsets, skillsets and competences.
- The G20 RE Dialogue welcomes activities for development, accumulation and dissemination of scientific knowledge by related international organizations, partners and stakeholders, including Indigenous Peoples while fostering the protection and inclusion of their traditional knowledge, regarding resource efficiency.

6. Cooperate and collaborate with other international initiatives

- The G20 RE Dialogue will explore cooperation and collaboration with other global and regional existing initiatives, including the G7 Alliance on Resource Efficiency to share outcomes, facilitate actions and build the necessary capacity for sustainable, efficient, and effective use of resources, including environmentally-sound management of waste.
- The G20 RE Dialogue will explore opportunities to hold meetings/workshops with relevant initiatives on a back-to-back basis or jointly, as appropriate including on decarbonisation such as the Industrial Deep Decarbonisation Initiative under the Clean Energy Ministerial.
- The G20, Members, in alignment with relevant global processes, will strengthen bilateral and multilateral cooperation in years ahead, including through the development of public-private partnerships, cooperative projects active in more than one G20 Member's territory and the involvement of the civil society, with the aim to share knowledge, expertise and technologies for increased resource efficiency and circular economy.

7. Work with the G20 Implementation Framework for Actions on Marine Plastic Litter

Given the close nexus between resource efficiency and marine litter issues, the G20 RE Dialogue may, as one of the relevant co-organising meetings, facilitate follow-up work on the G20 Implementation Framework on Marine Plastic Litter, utilising the opportunities and resources of the G20 RE Dialogue meetings to enhance synergies and minimise duplication, which will be ultimately decided by the G20 presidencies.

Annex Topics and activities voluntarily advanced by G20 Members under the Roadmap^[2]
